

Now available for US and EMEA

## CELLweaver compact is the easiest way to achieve fast and reliable Internet on any vessel.

Our latest solution combines proven hardware with sophisticated software. 2 modems are combined to achieve one high capacity data stream. Get access to your internet based services on board your ship. Our software enhancement provides resilience, high performance and access to your media services in other countries in the most cost-effective way. Benefit from our well known experience in hosting maritime data traffic.

### USER BENEFITS
